Temporary filter placement, now feasible, combined with anticoagulation and followed by anticoagulation alone after filter removal, may prevent early pulmonary embolism recurrence and avoid delayed deep vein thrombosis. 11-13 Moreover, filter benefit may be greater in patients at higher risk of early pulmonary embolism recurrence, ie, those.

Inferior vena cava filter - Wikipedia An inferior vena cava filter (IVC filter) is a type of vascular filter, a medical device that is implanted by interventional radiologists or vascular surgeons into the inferior vena cava to presumably prevent life-threatening pulmonary emboli (PEs). Their effectiveness and safety profile is not well established, and in general, they are only recommended in some high-risk scenarios.
